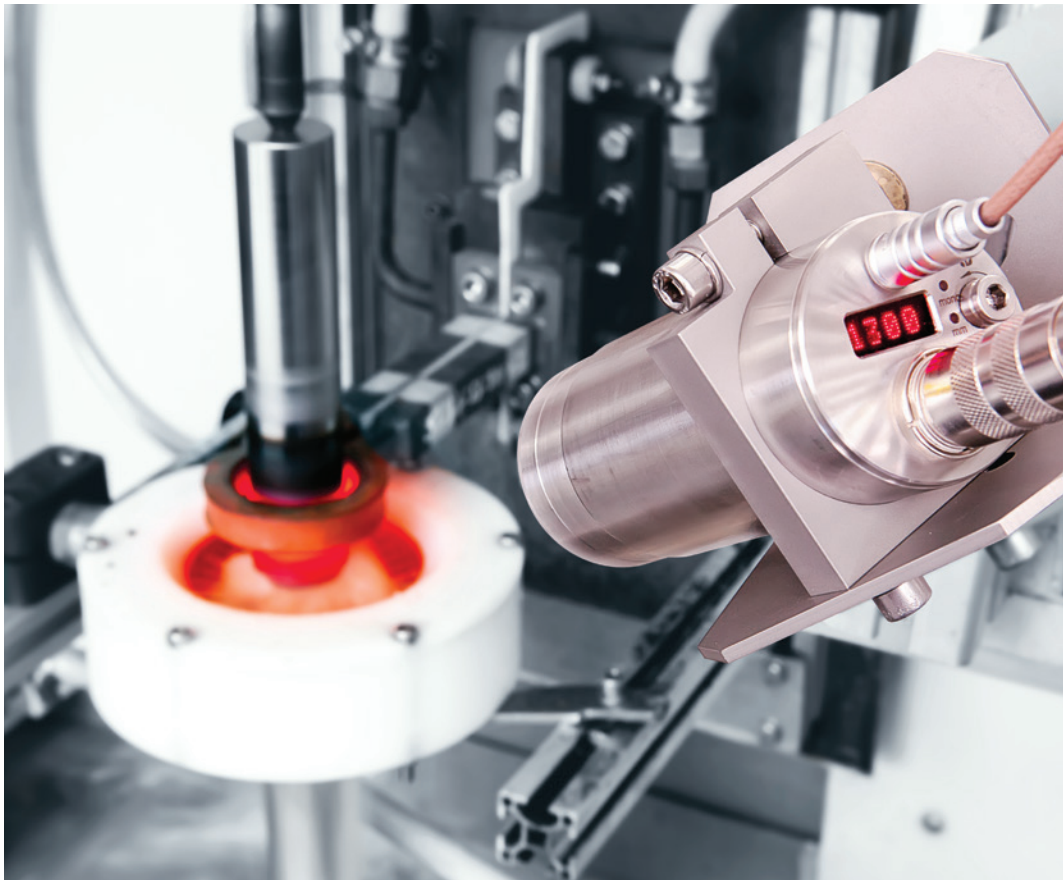
LUMASENSE® TECHNOLOGIES



LUMASENSE IMPAC PYROMETERS

Product Overview

Highly Accurate Infrared Thermometers for Non-contact Temperature Measurements

LumaSense's IMPAC pyrometers are temperature measurement instruments that operate on the principle of infrared radiation, i.e. they detect infrared radiation of objects to determine the temperature.

In many industry sectors, the use of non-contact temperature measurement instruments is an important technology. For example, it is used for controlling complete factory processes or measuring even the smallest components to ensure a consistent quality level.

With a huge pyrometer product portfolio developed from years of research and customer contact, LumaSense Technologies provides solutions for nearly every application request. Special solutions that are not listed in this brochure can also be quickly adapted to customer or application specific requirements.

This overview gives an impression of the broad variety of pyrometers and the possibilities that they provide. The instruments are classified in application areas and thereunder in product series.

Metallic, ceramic, and graphite surfaces

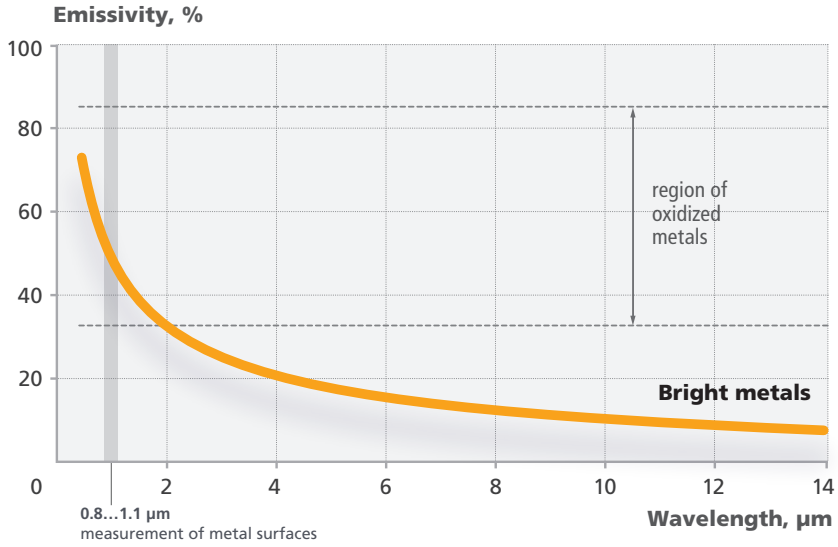
EMISSIVITY OF METALS

The emissivity of bright metal surfaces is high at short wavelengths and decreases with lengthening wavelengths. In the presence of oxidized and soiled metal surfaces, results are not necessarily consistent; emissivity may be strongly influenced by temperature and/or wavelength.

Metal components are often bright after machining, and their surfaces change when heated. At temperatures above 300 °C, tarnishing colors and increasing oxidation scale usually appear. This needs to be taken into consideration to avoid measurement errors.

Shiny metal surfaces strongly reflect infrared radiation, i.e. their reflection coefficient is high and their emission coefficient is low.

A hot object has a high reflection coefficient and, if it is close to where a temperature reading needs to be taken, it affects the value of that reading (especially with hotter objects).



FEATURED PRODUCT

PORTABLE PYROMETERS SERIES 8

—

Portable pyrometers suitable for measuring metals, ceramics, graphite, etc. or special applications such as pouring streams or in coke ovens.

- Precision optics for small spot sizes
- Robust die cast housing for use in harsh environments
- Large data storage
- Short response time for measurements of fast processes
- Temperature display on housing, in view finder, and multifunctional display

SERIES 8 PORTABLE

SERIES 15

Model	IS 8 pro	IS 8-GS pro	IGA 8 pro	IGA 15 plus
Brief Description	Very fast portables for measurements on metals and ceramics. Very small spot sizes, maximum value storage, temperature indicator.	Especially designed for measurements on molten metals in the pouring stream.	Very fast portables for measurements on metals and ceramics. Very small spot sizes, maximum value storage, temperature indicator.	Measurement of metals, ceramics, graphite, etc. Laser targeting light, min./ max./ avg., data storage, close-up lens for spot sizes up to 1.25 mm.
Temperature Ranges	600…1800 °C 750…2500 °C	1000…2000 °C	250…1600 °C 280…2000 °C	250…1800 °C
Spectral Range	0.78…1.1 µm	0.55 µm	1.45 ... 1.8 µm	1.45…1.8 µm
Measurement Uncertainty	0.4% oR + 1 °C	0.4% oR + 1 °C	0.4% oR + 1 °C	0.6% oR
Repeatability	0.1% oR or 0.8 °C	0.1% oR or 0.8 °C	0.1% oR or 0.8 °C	0.2% oR
Optics	Focusable optics: 500…9000 mm Optional: close-up-lens 250…500 mm	Focusable optics: 500…9000 mm Optional: close-up-lens 250…500 mm	Focusable optics: 500…9000 mm Optional: close-up-lens 250…500 mm	Fixed optics: a=800 mm Optional: close-up-lens a=250 mm
Field of View (Minimum spot size Ø in mm)	min. 500:1 (1 mm) w. close-up-lens: 0.5 mm	180:1 (2.8 mm) w. close-up-lens: 1.1 mm	min. 310:1 (1.6 mm) w. close-up-lens: 0.8 mm	min 200:1 (4 mm) w. close-up-lens: 1.25 mm
Alignment	Through-lens-sighting	Through-lens-sighting	Through-lens-sighting	Laser targeting
Exposure time t_{90}	1 ms	500 ms	1 ms	20 ms
Output	USB	USB	USB	USB

METALS

FEATURED PRODUCT

ISR 6-TI ADVANCED

—

First industrial grade hybrid pyrometer – combination of pyrometry and thermal imaging in a single solution.

- Built-in video camera with short wavelength infrared filter
- Auto calibration of thermal image relative to accurate pyrometer temperature reading
- Definition and evaluation of ROIs (Regions of Interest) in the thermal image
- Inclusive video cable and Video-to-USB grabber for use with InfraWin software

SERIES 5

SERIES 6

Model	ISQ 5	ISQ 5-LO	IS 6 Advanced	IGA 6 Advanced
Brief Description	Digital, fast pyrometer in 2-color design (switchable to mono mode) with analog output and digital interface, max. value storage, adjustable temp. Range. Different optics and different sighting options.	Digital, fast fiber optic pyrometer in 2-color design (switchable to mono mode) with analog output and digital interface, max. value storage, adjustable temp. range. Various optical heads available.	Extremely fast and highly accurate digital pyrometer with very long temperature ranges, analog output, digital interface, focusable optics, and integrated LED display.	Extremely fast and highly accurate digital pyrometer with very long temperature ranges, analog output, digital interface, focusable optics, and integrated LED display.

FEATURED PRODUCT

IGAR 6 ADVANCED

—

Digital ratio pyrometer with possible combination of 1-color and 2-color measurement.

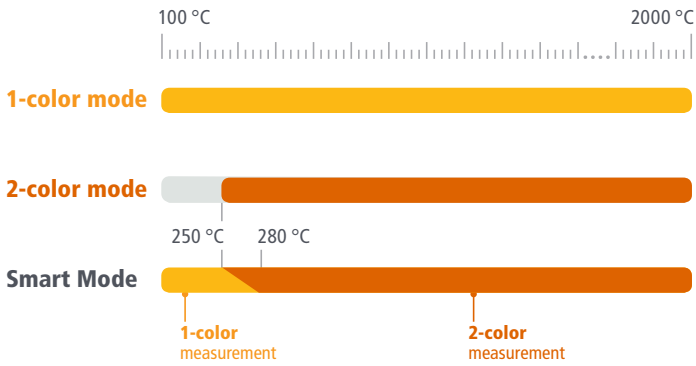
Wide temperature ranges and various operating modes:

- 1-color mode: 100...2000 °C
- 2-color mode: 250...2000 °C
- Smart mode: automatic (temperature-dependent) transition from 1-color to 2-color mode

Very fast response time for highly dynamic processes. Automatic emissivity determination. 4 digit LED display. Fully digital core for sub-ranging and adopted analog output.

OPERATING MODES

—



IGA 6/23 Advanced

Low temperature version of the IGA 6 Advanced for temperature measurement on metals starting at 50 °C.

50…1000 °C
75…1300 °C
150…1800 °C

2…2.6 µm

< 1500 °C: 0.3% oR + 2 °C
> 1500 °C: 0.6% oR

0.15% oR + 1 °C

Manually focusable
between 210…5000 mm

min. 350:1
(min. 0.6 mm)

Laser targeting or through-lens-sighting or color TV camera

0.5 ms,
adjustable up to 10 s

0/4…20 mA, RS485,
(RS232 optional)

ISR 6 Advanced

Highly accurate digital, fast pyrometer in 2-color design (switchable to mono mode) with analog output and digital interface, focusable optics, and integrated LED display.

600…1400 °C
700…1800 °C
800…2500 °C
1000…3000 °C

Ch. 1: 0.9 µm
Ch. 2: 1.05 µm

< 1500 °C: 0.3% oR + 2 °C
> 1500 °C: 0.6% oR

0.15% oR + 1 °C

Manually focusable
between 210…5000 mm

min. 350:1
(min. 0.6 mm)
Option: line optics

Laser targeting or through-lens-sighting or color TV camera

2 ms,
adjustable up to 10 s

0/4…20 mA, RS485,
(RS232 optional)

ISR 6-TI Advanced

Highly accurate digital pyrometer in 2-color design with built-in video camera system and infrared filter for non-contact measurement and display of thermal images.

700…1800 °C

Ch. 1: 0.9 µm
Ch. 2: 1.05 µm

< 1500 °C: 0.3% oR + 2 °C
> 1500 °C: 0.6% oR

0.15% oR + 1 °C

Manually focusable
between 210…5000 mm

min. 190:1 (min. 1.1 mm)
FOV thermal image: 6.0° x 4.5°
Pixels: 768 x 576

Thermal image or video image (b&w)

2 ms, adjustable up to 10 s
Thermal image: up to 25 Hz

0/4…20 mA, RS485 (RS232 optional),
Video signal

IGAR 6 Advanced

Highly accurate digital pyrometer in 2-color design with possible combination of 1-color and 2-color measurement.

1-color & smart mode: 100…2000 °C
2-color mode: 250…2000 °C

Ch. 1: 1.5…1.6 µm
Ch. 2: 2.0…2.5 µm

< 1500 °C: 0.4% oR + 2 °C
> 1500 °C: 0.8% oR in °C

0.2% oR + 1 °C

Manually focusable
between 210…5000 mm

min. 100:1
(min. 2.1 mm)
Option: line optics

Laser targeting or through-lens-sighting or color TV camera

2 ms,
adjustable up to 10 s

0/4…20 mA, RS485,
(RS232 optional)

METALS

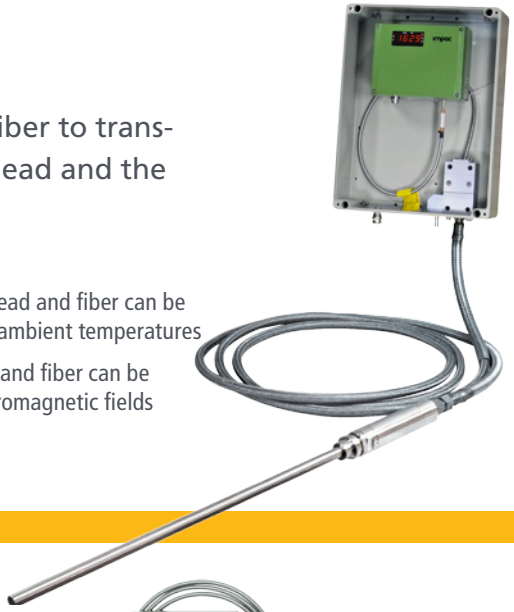
FIBER OPTIC PYROMETERS

—

Fiber optic pyrometers use an optical fiber to transmit the radiation between an optical head and the measuring transducer.

Examples:

- Various optical heads available
- Can be used for measurements in vacuum chambers using feed through flanges
- The optical head and fiber can be used at high ambient temperatures
- Optical head and fiber can be used in electromagnetic fields



SERIES 12

Model	ISR 12-LO	ISR 12-LO/GS	IGAR 12-LO
Brief Description	Fully digital, very fast pyrometer in 2-color design (switchable to mono mode), with fiber optic cable lengths up to 30 m, display and laser targeting light, very small spot sizes, analog output and digital interface, maximum value storage.	Special version of ISR 12-LO for measurement of pouring streams. FEATURED PRODUCT

SERIES 12-TSP

—

Transfer Standard Pyrometers for verification of blackbody calibration source temperatures.

The accuracy of a calibration source (blackbody) is likely to drift over the course of time from the defined specification. Special Transfer Standard Pyrometers meet extreme high accuracy specifications and are used to transfer temperature data from a primary infrared source to other calibration sources.

IS 12, IS 12-S

Fully digital, highly accurate, very fast pyrometers. Built-in digital display, view finder and optional targeting light, very small spot sizes, variable or fixed optics, analog output, digital interface, maximum value storage. Option: built-in scanner (-S).

FEATURED PRODUCT

SERIES 140 WITH PROFIBUS, PROFINET, OR ETHERNET INTERFACE

—

Next to the standard interfaces RS232 and RS485, the IS 140, IGA 140, and IGA 140/23 pyrometers are also available with internal Profibus, Profinet, or Ethernet interface.

Easy integration into existing Profibus or Profinet systems or into the existing local network.

- -PB types are equipped with a Profibus-DP interface
- -PN types are equipped with a Profinet interface
- -ET types are equipped with an Ethernet interface

SERIES 140

IS 140

Fully digital, very fast pyrometer. Very small spot sizes, focusable optics. Display, buttons for instrument settings, analog output, digital interface, maximum value storage.

SOFTWARE

TQCS: TEMPERATURE QUALITY CONTROL SYSTEM

—

Complete recording and archiving of process temperatures.

- Central, order-related, and manipulation-safe temperature recording for every single work piece – simultaneously on up to 30 machines
- Connects easily to existing machine controllers
- Reliable identification and discharge of scrap
- Modular system for easy upgrade or retrofit

FEATURED PRODUCT

HIGH SPEED SERIES 740

The High Speed Series 740 offers ultra fast pyrometers with targeting light, very small spot sizes, and variable or fixed optics with an optional view finder.

- Extremely fast response time of only 6 µs for measurements of fast moving objects or fast temperature changes.
- Models are also available as measuring stations including bench unit, display, power supply, USB interface, cables, etc.

FEATURED PRODUCT

INFRARED TEMPERATURE SWITCHES

—

Infrared temperature switches recognize hot objects (without contact) to trigger a switch process.

The switching level can be adjusted and the switch status is indicated by LED. Switches are used for recognizing, counting, or positioning hot objects, e.g. in forges or steel works.

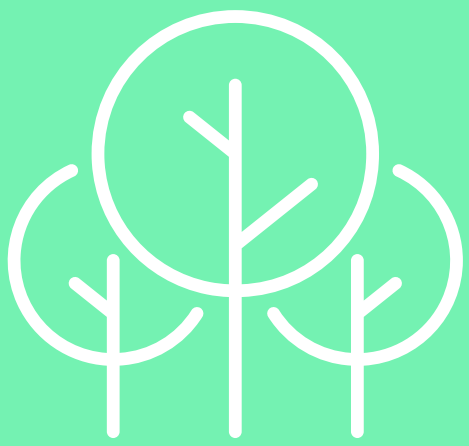
Non-metallic surfaces

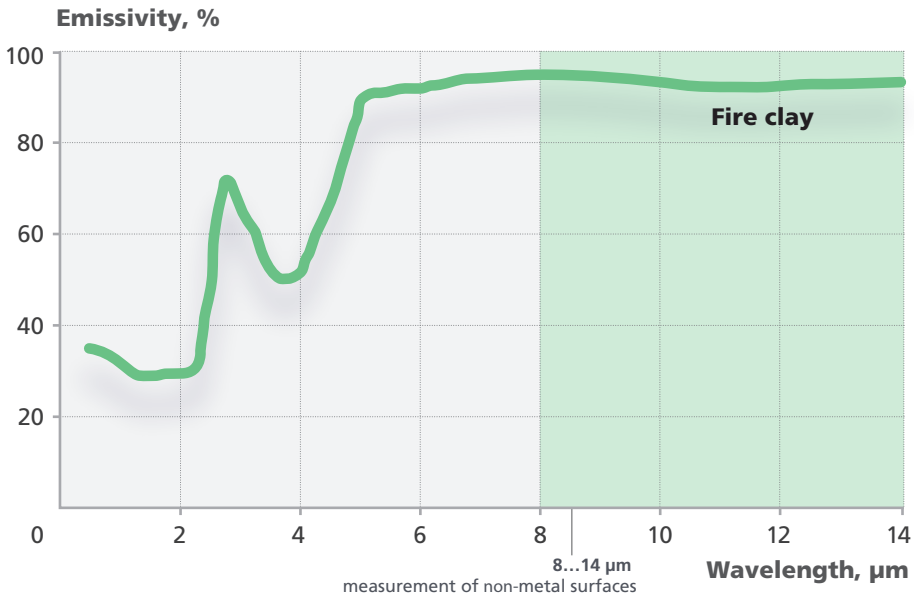


The group of non-metals includes organic and inorganic materials.

EMISSIVITY OF NON-METALLIC SURFACES

The group of non-metals includes organic materials, such as foodstuffs, wood or paper, as well as inorganic materials such as ceramics or fire clay.

The emissivity of non-metals rises with increasing wavelength. Generally speaking, from a certain wavelength, the emissivity is nearly constant. The color of the object as seen in the visible light spectrum, has practically no influence on the emissivity behavior in the mid-and long-wave infrared.



LUMASENSE SERVICE AND SUPPORT

—

The mission of the LumaSense services organization is to keep you focused on your business by delivering world-class customer support.

This means keeping your assets reliable and functioning, and providing you with the knowledge and expertise required to solve complex problems quickly.

The LumaSense service portfolio is organized into 4 major areas:

- Factory Services
- Field Services
- Support Services
- Training and Consulting

SERIES 5

Model	IN 5	IN 5 plus	IN 5-H plus	IN 5-L plus
Brief Description	2-wire pyrometer with 3 fixed optics and analog output for general applications.	Digital pyrometer for general applications. With analog output, digital interface, max. / min. value storage, adjustable measuring range, different optics, laser targeting light.	Like the IN 5 plus but with faster response time.	Like the IN 5 plus but with better optical performance (field of view).

COMPREHENSIVE PYROMETER ACCESSORIES

—

LumaSense provides an extensive portfolio of mechanical and electrical accessories for all types of pyrometers as well as an offering of various Pyrometer Software.

The mechanical accessories e.g. include: cooling jackets, mounting devices, flange systems, laser aiming lights, air purge units, sighting tubes, optical components, etc.

The electrical accessories e.g include: power supplies, controllers, connection cables, indicators/displays, converters, protocol converters, I/O modules, scanning systems, etc.

Glass surfaces

Pyrometers for molten glass, flat glass, container glass, technical glass, etc.

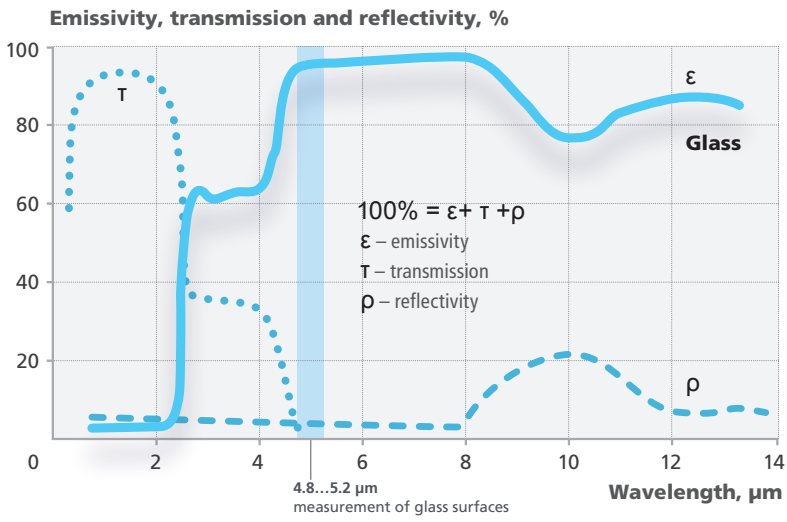
EMISSIVITY OF GLASS SURFACES

Partially transparent materials such as glass and quartz have their own unique emissivity. The emissivity of glass is characterized by wavelength ranges where infrared radiation largely passes through the glass material (transmission), others in which it is absorbed almost completely (absorption), and where it penetrates into the glass surface depending on the glass type.

In small absorption bands these materials are opaque to radiation, which is why these bands are particularly suited for temperature measurements.

Glass is transparent in the visible light and near infrared ranges (to about 3 µm), which means that its transmission is high, and consequently its emissivity low. As you can see in the figure to the right, the emissivity of glass is very high in the range from 4.5 to 8.5 µm, because glass has a wide absorption band in this spectral range. Above 8 µm the reflection of glass increases sharply, making accurate measurements difficult.

As a rule, the wavelength range used for temperature measurements on glass surfaces lies around 5.14 µm (for glass thicknesses of 1 mm and more at medium to high temperatures), or 7.75 µm (for glass thicknesses below 1 mm and low to medium temperatures).



TYPICAL WAVELENGTHS USED IN THE GLASS INDUSTRY

—

Depending on the application, Glass manufacturers may use different wavelengths to measure the glass surface or even inside the glass.

0.78...1.15 µm	e.g. for molten glass or refractory in melting furnace, forehearth, feeder, glass gobs, etc. (penetration depth into glass: up to approx. 40 mm)
3.9 µm	for measurement through flames, e.g. in heating zone of tin bath (slight penetration into glass)
5.14 µm	for glass surfaces
7.8 µm	for ultra-thin glass sheets (< 1 mm)

SERIES 5

Model	IN 5/5	IN 5/5 plus	IN 5/5-H plus	IN 5/5-L plus
Brief Description	2-wire pyrometer for glass surface measurement.	Digital pyrometer for glass surface measurement. With analog output, digital interface, max./min. value storage, adjust. sub-range, laser targeting light.	Like IN 5/5 plus but with faster response time.	Like IN 5/5 plus but with better optical performance (field of view).
Temperature Ranges	100…600 °C 200…800 °C 100…1300 °C 400…2500 °C	100…1300 °C 400…2500 °C"	200…1300 °C 400…2500 °C	200…1300 °C 400…2500 °C
Spectral Range	5.14 µm	5.14 µm	5.14 µm	5.14 µm

GLASS

FEATURED PRODUCT

IN 6/78

Pyrometer for stress-free production of thin and thinnest glass sheets.

- Measurement of ultra-thin glass sheets with less than 1 mm thickness
- Easy installation and maintenance due to compact, rugged IP65 stainless steel housing for harsh environments
- Multiple onboard digital and analog interfaces for direct and fast PLC communication
- Specially designed and coated high-end optics for high accuracy and excellent size of source effects

SERIES 6, 50

SERIES 140

Model	IN 6/78-L	IN 6/78-Hp	IS 50-LO/GL	IN 140/5	IN 140/5-H
Brief Description	Digital pyrometer for the measurement of ultra-thin glass sheets with less than 1 mm thickness.	Digital pyrometer for the measurement of ultra-thin glass sheets with less than 1 mm thickness.	Fiber optic pyrometers for measurement of molten glass in forehearth, feeder, and gobs. Adjustable measuring ranges. 2-wire design, analog output, service interface.	Pyrometers for glass surface measurement. Laser targeting light, through-lens view finder, or color TV camera. Focusable optics with small spot sizes.	Like IN 140/5 but with faster response time.
Temperature Ranges	400…1100 °C	150…800 °C	600...1800 °C	250…1400 °C 300…1600 °C 450…1500 °C 500…2500 °C	250…1400 °C 300…1600 °C 450…1500 °C 500…2500 °C

DID YOU KNOW?

Careful monitoring of glass temperatures and of production equipment and machinery is the only way to ensure that product quality will meet the stringent marketplace requirements.

LumaSense offers more than 55 years of experience in non-contact measuring technology

The principle advantages of non-contact temperature measurements are:

- Easy handling
- Fast response
- High flexibility
- Prolonged service lives
- No contamination of the molten glass
- Increased throughput rates

SERIES 210 M67S

IN 140/5-L	**IN 210/5**	**M67S** 0.78…1.06 µm	**M67S** 4.8…5.2 µm
Like IN 140/5 but with better optical performance (field of view)	Glass surface measurement version of IN 210, 2-wire design and service interface. Programmable measuring range.	Analog 2-wire pyrometer with view finder for high temperature applications.	Analog 2-wire pyrometer with view finder for measurement of glass surfaces or thin glass.

Special materials

Pyrometers for special applications and materials

EMISSIVITY OF SPECIAL MATERIALS

LumaSense produces a wide range of specialized pyrometers beyond those described in the previous sections. These pyrometers are customized to address specific applications and materials, and are often available with the needed accessories to provide a complete solution package.

SOME EXAMPLE APPLICATIONS INCLUDE:

Measuring flame or gas temperature, by monitoring the CO_2 absorption line

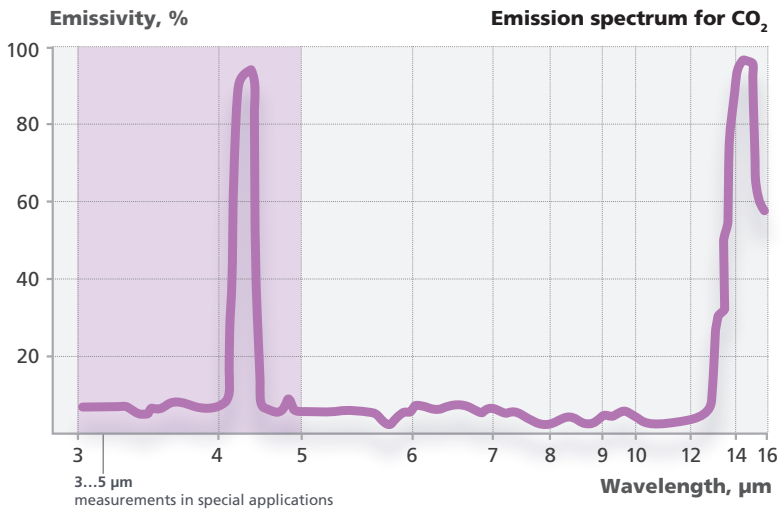
Measuring temperature on thin plastic films

Measuring Silicon and Sapphire wafers in Semiconductor & Compound Semi processes

To measure temperatures for these specialized applications, one must carefully understand the emissivity, reflectance, and transmissions of the objects to be measured. We then select the proper detectors and filters to maximize the detected signal. For example, when measuring the temperature of a combustion flame where there is expected to be significant CO_2 content, we select a narrow band filter at 4.5 µm where the emission from this gas is high (see figure).

If we instead choose a 3.9 µm filter, then we can effectively avoid the CO_2 and H_2O emission bands, and look through the flame.

If you have a specialized need, which is not covered with the pyrometers below, please consult our Applications Engineering Team.



APPLICATION CONSULTING AND SUPPORT

—

Supporting Your Applications Needs

The LumaSense Global Applications Engineering team is staffed with Sr. Engineers to help develop new solutions for customers worldwide, with focus on core markets and challenging applications.

LumaSense Technologies is known for its ability to build products for custom applications using our temperature and gas sensing products to meet the stringent design requirements of the energy, industrial and clean technology markets.

Contact our dedicated Customer Care Team to request an application consultation.

SERIES 5, 6

SERIES 12

Model	IN 5/9 plus	ISR 6 Advanced	IS 12-Al, 12-Al/S	IS 12-Si
Brief Description	Digital pyrometer especially designed for measurement of sapphire. With analog output, digital interface, max. / min. value storage, different optics, laser targeting light.	Highly accurate digital, fast pyrometer in 2-color design (switchable to mono mode) with analog output and digital interface, focusable optics, and integrated LED display.	Special version of the IS 12, designed for the measurement of Aluminum. IS 12-Al/S with built-in scanner, scanning angle adjustable between 0...4°, scanning frequency between 0...10 Hz.	Dedicated version of the IS 12, designed for measuring silicon wafers.
Temperature Ranges	0…1500 °C	600…1400 °C 700…1800 °C 800…2500 °C 1000…3000 °C	350…900 °C 400…1050 °C	350…1000 °C 400…900 °C 400…1300 °C 500…1800 °C

Output	0/4…20 mA, RS232 (RS485 on request)	0/4…20 mA, RS485, (RS232 optional)	0/4…20 mA, RS232 or RS485 (switchable)	0/4…20 mA, RS232 or RS485 (switchable)

SPECIAL MATERIALS

FEATURED PRODUCT

IPE 140

—

Pyrometers available with various dedicated filters for specific applications.

Next to the standard versions, these pyrometers are also available with specific filters to measure dedicated materials, including thin PE and PP foils, CO_2 or the measurement through clean combustion flames and gases.

SERIES 50

SERIES 140

Model	IS 50-Si-LO plus	IS 50-Al-LO plus	IPE 140/34	IPE 140/45
Brief Description	Special version of the IS 50-LO plus with special wavelength for the measurement of silicon wafers.	Special version of the IS 50-LO plus with special wavelength for the measurement of Aluminum.	Special version of the IPE 140 for measurement of thin PE and PP foils with a minimum material thickness of only 30 µm.	Special version of the IPE 140 for measurement of combustion flames and hot gases containing CO_2. This pyrometer is used e.g. in the LumaSense FEGT system for continuous measurement of the Furnace Exit-Gas Temperature in boilers and furnaces.
Temperature Ranges	400…1300 °C 500…1600 °C	400…1000 °C	50... 400 °C 75... 500 °C	400…2000 °C

FEATURED PRODUCT

UV 400 & UVR 400

—

Next generation of temperature sensors developed specifically for GaN-based MOCVD epitaxy processes (metal-organic chemical vapor deposition).

Improve yield through true wafer temperature measurement

Setting new standards for LED production processes (reliable correlation between process temperature and final product wavelength)

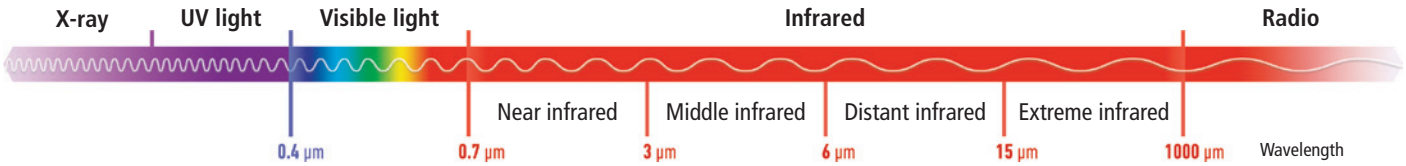
Measure temperature directly on the GaN layer using UV wavelength instrumentation

Real time measurement of deposition thickness using a high-speed reflectometer (UVR 400)

M67S SERIES UV 400, 315

M67S 7.9 µm	**M67S** CO_2	**UV 400, UVR 400**	**PhotriX**	**IGA 315-K**
Analog 2-wire pyrometer with view finder. Special filter for thin plastic films or thin glass.	Analog 2-wire pyrometer with view finder. For measurement of combustion flames and hot gases containing CO_2.	Digital pyrometers with extremely short wavelength (in the UV spectral range) for true Wafer Surface Temperature and Reflectance Instrumentation for GaN-based MOCVD epitaxy processes. The UVR 400 includes an additional reflectometer at 635 nm with 0.5 kHz measurement speed. This enables measurement of deposition thickness. These pyrometers are also suitable for measurements on uncoated silicon wafers.	Digital, extremely sensitive pyrometer to measure small signals and lower temperatures. Configurable collection optics: lens optic, lightpipe optics, fiber optics to remote lens, fiber optics to lightpipe.	Portable pyrometer for non-contact temperature measurement of nozzle bricks and air stages in coking ovens at standard distances between 1 and 12 m.
0…300 °C 100…400 °C 150…600 °C	320…1200 °C 400…1400 °C 450…1900 °C 800…2200 °C	650…1300 °C	various ranges between 30…2600 °C	600…1600 °C
7.9 µm	CO_2 hot band	383...410 nm	5 ranges: 0.65 µm, 0.88 µm, 0.9 µm, 1.55 µm, 0.7…1.65 µm	1.58…1.8 µm
±0.5% of full scale or 1 °C	±0.5% of full scale or 1 °C	< 1000 °C: 3 °C > 1000 °C: 0.3% oR	±1.5 °C or 0.15% oR	0.75% oR
±0.2% of full scale span	±0.2% of full scale span	0.1% oR + 0.1 °C	0.1 °C	< 0.3% oR
1 focusable optics: 350 mm…∞ 1 fixed optics a = 50 mm	2 focusable optics: 350 mm…∞ 150…350 mm	fixed optics	Configurable collection optics: Fixed Optics, Lightpipe, or Fiber Optics with fixed optics or Lightpipe	Focusable optics: 1000…12000 mm
Focusable optics: min. 30:1 (11.9 mm) Fixed: min. 30:1 (1.5 mm)	min. 30:1 (1.8 mm)	min 8:1 (9.8)	Optics or lightpipes adapted to customers request (min 0.5 mm)	~ 300:1 (e.g. 30 mm @ 9 m distance)
Through-lens-sighting	Through-lens-sighting	—	—	Through-lens-sighting
100 ms	300 ms	Integration Time: Min of 8 ms	1 ms, adjustable up to 60 s	10 ms
4…20 mA	4…20 mA	0/4…20 mA, RS485	4…20 mA, 0…10 V, RS232, RS485	USB Interface adapter

Infrared Temperature Measurement

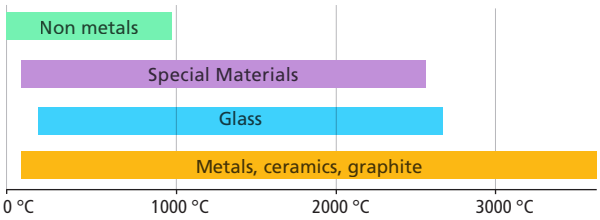


The non-contact temperature measurement (pyrometry) is an optical measurement based on the property of all materials to send out electromagnetic radiation (infrared radiation). The infrared thermometer (pyrometer) uses this radiation to determine the temperature. The pyrometer aims with the optics at a certain spot of the object and determines the temperature of this spot. Today, typically spectral responses of pyrometers are in the near, middle, and long infrared.

Selection of the Appropriate LumaSense IMPAC Pyrometer

TEMPERATURE RANGE

Our pyrometers measure temperatures from -40 to 3500 °C. The instruments are available in different temperature ranges. The ranges shown in the chart do not show one single temperature range but give an overview of all available measurable temperatures.



SPECTRAL RANGE

The material of the measured object demands the correct selection of the optimum spectral range of the pyrometer for a specific application. Therefore, the correct spectral range is one of the most important parameters. For typical wavelengths please see page 8.

RESPONSE TIME

The response time is the time interval between the instant of an abrupt change in the value of the measuring temperature and the instant from which the measured value of the pyrometer remains within specified limits.

SIGHTING

For easy alignment of the pyrometers to the measuring object, different sighting systems are available:

- Aiming (LED or laser)
- View finder
- TV camera

DESIGN

Our pyrometers are designed for the use in industry under rough conditions. The housings of the fixed pyrometers are made of stainless steel or die cast aluminum with the protection class of IP65. The housings of the portables are made of robust plastics or die cast aluminum.

Available designs include:

- Compact pyrometers with integrated lens
- Fiber optic pyrometers (LO)
- Portables

OUTPUT

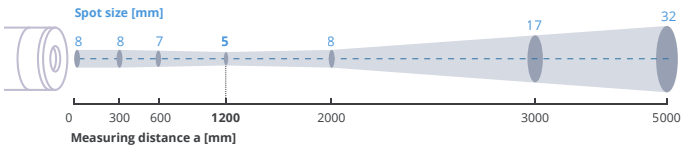
Different pyrometers provide different outputs. Analog outputs and digital interfaces are available. Some pyrometers have various switchable outputs.

- Analog output 0–20 mA or 4–20 mA or 10 mV/ °C or 0–5 V or thermo couple type J or K
- Digital interface RS232 or RS485
- Fieldbus-connection, integrated ProfiBus, ProfiNet, Ethernet
- Switch output for IR switch: 20 V, max. 30 mA

FIELD OF VIEW

The dimensions of the measured object determine the required spot size of the pyrometer. The measured object must at least fill the spot size to achieve a correct temperature measurement. Spot sizes are dependent on the type of pyrometer and measuring distance and can be calculated using the distance ratio or field of view (FOV).

FOV = Measuring Distance / Spot Size



(e.g. 240:1 means: in a distance of 1200 mm the spot size is 5 mm)

Service

The mission of the LumaSense services organization is to deliver consistent world-class customer support so you can focus on your business. Our highly trained engineers, scientists, and PhDs are ready to partner with you to deliver the right sensing solutions with the best performance and longest-life.

You expect the highest quality from your investments in LumaSense technology; therefore, our promise is to:

- Deliver responsive customer care
- Assist in keeping your assets reliable and working
- Provide you the knowledge and expertise required to solve complex problems quickly

The Customer Care team at LumaSense Technologies is your single point of contact for:

- Technical and product support
- Order, shipment, repair and parts
- Service scheduling
- Warranty services

TECHNICAL AND PRODUCT SUPPORT

Since our pyrometers are available in many different designs and specifications for almost any application, questions regarding the correct use, the settings, or the installation of the instruments may arise. Many of these questions can only be answered in an individual dialogue. Accordingly, our experienced personnel are at your disposal to help you when you need it.

ORDER, SHIPMENT, REPAIR AND PARTS

LumaSense Technologies produces high quality temperature measuring instruments, which operate efficiently, even under the toughest conditions. Nevertheless, a repair of an instrument may become necessary. Our repair services provide a fast turn round of your repair order so that your instruments will be available to you again as quickly as possible.

CALIBRATION SERVICES

LumaSense pyrometers work accurately and within their technical specifications for many years. However, periodic calibration of the instruments is highly recommended.

Our adjustment and calibration services use a wide range of our own blackbody calibration sources that are certified by all international standards bodies. Within France, Germany, and the USA, LumaSense also offers an on-site adjustment and calibration service for a wide range of pyrometer types.

In either case, if you send your pyrometer to us or take advantage of our mobile service, inspection certificates are issued. In fact, LumaSense pyrometers always include an inspection document, which confirms the operational reliability as well as measuring accuracy stated in the technical specifications.

FIELD SERVICES

We understand that successful assembly of one or more pyrometers into an existing system often requires a careful inspection of your facility. Our field application engineers are available to ensure you gain optimal performance by way of on-site repairs, calibrations, and/or training.

SERVICE CONTRACT OFFERINGS

LumaSense offers extended warranties and calibration contracts with an annual option to renew. These contracts can include preventative maintenance plus software and firmware upgrades depending on the particular contract level you choose. Additional benefits include:

- Locked in pricing per term
- Discounts on related parts, repairs, and training

With a 50-year history of creating efficiencies through light-based measurement, LumaSense Technologies, Inc., delivers innovative temperature and gas sensing instruments for the Global Energy, Industrial Materials, and Advanced Technologies markets.

Our unrivaled passion for excellence is why we have become one of the world's most trusted sensing solution providers. Beyond providing precision engineered products, our customers turn to us knowing our commitment to their success comes first.

With expert application understanding and a growing portfolio of products, LumaSense can combine several technologies together into novel solutions even for the most complex environments.
